

BEVLEX® PLUS 180 SERIES reinforced hose

GLASS-FLEX™ LINED REINFORCED HOSE

RECOMMENDED USE

Filtered- and carbonated water lines where algae growth can be a concern.

PRODUCT FEATURES AND CHARACTERISTICS

- The Glass-Flex™ liner is a hard smooth contact surface that is non-porous, non-reactive, odourless, tasteless and provides superior barrier, cleanability and flushability;
- It offers optimum taste properties with no extraction that could impart taste into the water;
- The glass-like smooth contact surface will not trap water-borne contaminants or provide sites for algae growth;
- Heavy walled construction resisting crushing and kinking and providing ease of handling during installation;
- Bevlex® Plus 180 Series offers the purity of the Bev-Seal Ultra® 175 Series with the handling ease of the Bevlex® 170 Series;
- Dual-walled silver/black layered with an opaque jacket preventing transmission of light including UV radiation through the hose wall, thus reducing the risk of algae growth in filtered water;
- Phthalate free.
